

Panorama Combi

The first real roller shutter with Panorama-field

Panorama-field with blind function

Height of field selectable from 50 to 100 cm

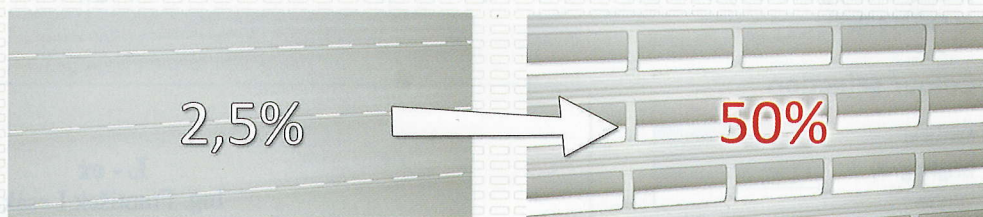

- + More light
- + More air
- + Transparency
- + Sun protection
- + Insect protection (optional)

The NEW combination of profiles

The new Panorama Combi combines the Panorama profiles with blind function and conventional aluminium roller shutter profiles.

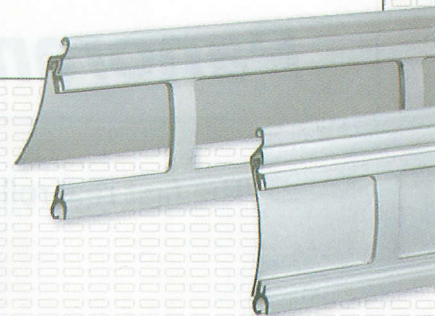

Wide Light and air openings

The Panorama-field with blind function has larger light and air openings than conventional roller shutters. It can be opened up to 50% for the incidence of light and air.

Panorama Combi

Panorama Combi is a roller shutter with blind function field. It has an innovative blind function to close and open the shutter on demand.

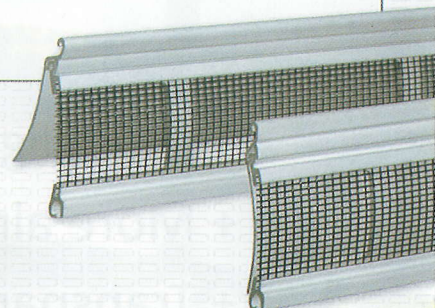

The Panorama field gives sun protection and provides a good transparency for view outside.

The large openings for air and light allow the incidence of indirect daylight and provide a lot of fresh air.

In the closed position Panorama Combi has protective functions like a conventional roller shutter.

Panorama Combi Plus

The product variant Panorama Combi Plus additionally provides the comfort of an integrated insect screen.

The Panorama field is completely made of extruded and powder coated aluminium profiles. In the upper and lower field of the Panorama Combi conventional roll formed and foamed filled aluminium profiles are used.

An insect screen made of stabile mesh wire is integrated in the Panorama field on demand.

The roller shutters Panorama Combi and Panorama Combi Plus are compatible with standard roller shutter boxes, guide rails, drives and controls. They are suitable for the use in new buildings, for refitting or replacement.
